

Virtual Teammate — Marketing Side Documentation

Public-facing site: the marketing pages, funnels, lead capture, content structure, SEO, and integrations that visitors and prospects experience. Companion doc: [DOCS-BACKEND.md](#) (plugins, custom code, portal, database). **Site:** the **legacy (old) virtualteammate.com** WordPress website — <https://virtualteammate.com>. (This is the prior WordPress build being superseded by the new [vtnew](#) marketing site.) DB table prefix [wpvividstg01_](#). **Platform:** WordPress + **Elementor Pro** (page builder + Theme Builder) on the [hello-elementor](#) theme.

1. What the site is

Virtual Teammate is a **staffing agency for virtual assistants** — medical, dental, and business/admin VAs. The marketing site's job is to:

1. Convince **businesses/practices** to hire a VA (lead generation → "Book a Demo" / "Book a Strategy Session").
2. Recruit **virtual assistants** to join the talent pool (applicant registration).
3. Showcase the **talent pool** (browsable VA profiles).
4. Educate via **case studies, courses, lead magnets, and a blog**.

The public marketing site sits in front of a gated **member portal** (clients, VAs, CSMs) — see the backend doc.

2. Site scale & content model

~615 published pages. They fall into clear buckets:

Bucket	Approx. count	Examples
Marketing / service pages	~30	Service landing pages, case studies, FAQ, testimonials, about
VA profile pages (vt-list / vt-list-by-category)	~234	"Vt List Aileen C", "Adrian Jay T" — auto-generated from HubSpot
Portal / app pages	~120	Dashboards, logins, registration, account, chat
Course / learning pages	~25	"Learning Marketing", "Course Catalog", department learning hubs
Lead magnets / resources	~15	Workbooks, worksheets, playbooks

The VA profile pages are **not hand-built** — they are generated by the custom [vt-hubspot-user-sync](#) plugin from HubSpot contacts (see backend doc). Treat them as data, not marketing pages.

3. Core marketing pages

Home

- [/](#) and slug [virtual-teammate-reliable-remote-talent-for-every-need](#) (ID 3181 / homepage Elementor template 3180). Title: "*Virtual Teammate | Reliable Remote Talent for Every Need.*"
- Tagline (site [blogdescription](#)): "**Hire Remote Assistants.**"

Service / specialty landing pages (the money pages)

These segment by vertical and drive demo bookings:

- **Healthcare Virtual Assistants** ([healthcare-virtual-assistants](#) , ID 3423) + a duplicate [-2](#) (74)
- **Dental Virtual Assistants** ([dental-virtual-assistants](#) , 3456)
- **Customer Service VAs** ([customer-service-virtual-assistants](#) , 3476)
- **Financial VAs** ([financial-virtual-assistants](#) , 3485)
- **Marketing VAs** ([marketing-virtual-assistants](#) , 3516)
- **Sales VAs** ([sales-virtual-assistants](#) , 3545)
- **Business Intelligence VAs** ([business-intelligence-virtual-assistants](#) , 3567)
- **Administrative VAs** ([administrative-virtual-assistants](#) , 3468)
- Niche helpers: "**Do I need a healthcare VA**" (7017), "**do-i-need-a-business-va**" (7026), **Hire a Business VA** (7066), **Hire a Healthcare VA** (7067).

- Task-depth content pages: **Healthcare 100 Tasks** (7022), **Business 100 Tasks** (7024), **Threads 100 Tasks** (7025).

Many service pages exist in **duplicate** (a `...-2` slug, IDs in the 4140s–4170s). These are A/B or rebuild variants — confirm which is canonical before editing (check which is in the nav menu and sitemap).

Conversion / funnel pages

- **Book a Demo** (`book-a-demo` , 3820; and `book-a-demo-2` , 4005)
- **Book Free Staffing Strategy Session** (`book-free-staffing-strategy-session` , 3805; `-2` 4021)
- **Thank You** (`thank-you` , 3964) — post-conversion page
- **Facebook Contact Page** (`facebook-contact-page` , 6525) — paid-social landing page

Trust / proof pages

- **Meet the Team** (the "About" page — slug `about-2` , ID 3960; older `about` , 3506)
- **Testimonials** (`testimonials` , 3631)
- **Case Studies** (`case-studies` , 3589) + **Business Case Study** (3610), **Healthcare Case Study** (3594)
- **FAQ** (`frequently-asked-questions` , 3625)
- **Privacy Policy** (`privacy-policy` , 3659)

Talent showcase

- **Talent Pool** (`talent-pool` , 3707), **Special Talents List** (`special-talents-list` , 6327), **Talent list** (`talents-list` , 1945), **Virtual Teammate Profiles** (`virtual-teammate-profiles` , 32015).
- These render the browsable VA cards/profiles (driven by the `vt-list-by-category` CPT + custom shortcodes).

Blog & content

- **Blog** (`blog` , 3603) and **Blog: Expert Tips by Virtual Teammate** (`blog-2` , 4170). 16 published posts.

Recruitment funnel (for VAs applying)

- **Application Process / Careers** (`careers` , 3519; `careers-3` , 3961), **Careers Listing** (3965)
- **Applicant Registration** (1925), **Applicant Register** (1666), **Applicants Login** (3980), **VA Registration** (3981)

4. Lead capture (forms)

Forms are built with **WPForms** (Lite). Four published forms:

Form	ID	Purpose	Fields	Where the lead goes
Home Page	3430	Qualifier on the homepage	Radio: "Are you a Doctor / Practice Manager / Practice Owner / Business Owner?" (Yes/No) + a redirect block for job-seekers	Email to site admin, subject "New Entry: Home Page"
Client Reconnect	6024	Re-engage lapsed clients	Name, Email, Comment	Email to admin, sender alert@seoechelon.com
Facebook Contact	6524	Paid-social landing form	Name, Phone, Email, Position	⚠ Recipient is a broken/mangled value (not a valid address) — must fix to a real inbox
Interactive Healthcare Landing Page Quiz	6988	Quiz-style lead magnet	Multi-page weighted quiz with progress bar	Email to admin; body = quiz outcome

Marketing also has its own lead-capture pipeline in the vtnew project (</lead.php> → [leads](#) DB table → portal). That is a separate codebase; this WordPress site uses WPForms + HubSpot. Don't confuse the two.

Custom marketing UIs (WPCode snippets — see backend doc)

- **Refer a Friend** ([\[refer_a_friend\]](#)) and **client referrals tab** ([\[vtm_referrals_tab\]](#)) — referral program UIs.
- **Request To Join** modal — a CTA modal that fires an email on submit.

5. HubSpot — the marketing engine

HubSpot is the CRM/marketing hub behind everything. Two integration layers:

1. **LeadIn** (official HubSpot plugin, active) — drops the HubSpot **tracking script** site-wide, captures form submissions, and pushes activity into the HubSpot CRM. Connected via OAuth ([leadin_portalId](#) , [leadin_refresh_token](#)). This is what powers HubSpot's own forms/popups/chat and visitor analytics.
2. **vt-hubspot-user-sync** (custom plugin) — the operational sync: turns HubSpot **contacts** (lead status "Virtual Teammate") into public **VA profile pages**, and HubSpot **companies** (lead status "Client - Active") into portal client accounts. See backend doc for the full state machine.

Marketing takeaway: a VA's public profile page is a direct projection of their HubSpot contact record. To change what shows publicly, you edit HubSpot (or the ACF fields), then the sync regenerates the page —

you do not hand-edit profile pages.

6. Videos

Presto Player (active) hosts video — VA intro videos and explainer/course content (524 `pp_video_block` records). Some videos are served from **BunnyCDN** via ACF fields (`upload_video`) and rendered through custom shortcodes (`[acf_presto_video]` , `[vt_acf_video]`).

7. SEO & technical marketing

- **Permalinks:** `/%postname%/` (clean URLs).
 - **Yoast SEO** is in use (the `wpseo_manager` capability exists and is reused for the CSM role). Manage titles/meta/sitemaps there.
 - **Site name:** "Virtual Teammate"; **admin/notification email:** `nricamora@virtualteammate.com` .
 - **Caching/performance:** LiteSpeed Cache (active). A performance-guard mu-plugin (`zzz-local-performance.php`) only runs in a development environment and is dormant on the live site — no SEO impact.
 -  **Data hygiene:** some absolute dev URLs were baked into page content historically (one bad mangled-URL variant has already been cleaned from posts + Elementor data). Use **Better Search Replace** (installed) to normalize any remaining hardcoded URLs to `https://virtualteammate.com` across the DB, and fix the form 6524 recipient.
-

8. Courses & education (content marketing / retention)

A learning section doubles as lead-nurture and member value:

- **Course Catalog** (`courses` , 4158), **Virtual Assistant Courses** (4012), **Advanced VA Blueprint Course** (379).
- Department learning hubs: **Learning Marketing**, **Learning Sales**, **Learning Finance**, **Learning HR**, **Learning IT**, **Knowledge Center**.
- Lead magnets: **Minutes to Millions Workbook** (3224), **Launch Resources Guide** (584), **Eisenhower Matrix** (2699), **Executive Assistant SOP** (2701), worksheets/playbooks.

Course videos are gated via Presto Player + Ultimate Member role checks.

9. Navigation

Two menus (the `if-menu` plugin shows/hides items by login state + role):

- **"Menu"** (term 3) — the primary public/marketing nav.
- **"Clientvtm Menu"** (term 22) — the logged-in client portal nav.

Logged-out visitors see marketing nav + Login; logged-in users see their dashboard + Log Out (swapped in by `client-dashboard-access.php`).

10. Quick "where do I edit X" cheat sheet

I want to change...	Where
A marketing page's layout/copy	Edit the page in Elementor
Header / footer / global template	Elementor → Templates → Theme Builder
A lead form or where its email goes	WPForms → the form → Notifications
A VA's public profile	HubSpot contact record (then re-run the sync) → or the ACF fields on the <code>vt-list-by-category</code> post
SEO title/meta for a page	Yoast SEO box on that page
Nav items / who sees them	Appearance → Menus + If Menu rules
Tracking / HubSpot connection	LeadIn plugin settings
Site-wide custom code/shortcodes	WPCode snippets (see backend doc)
