

Virtual Teammate — Marketing Site Guide

A non-technical, page-by-page guide to the Virtual Teammate marketing site: what every page contains, what it's for, the forms and calls-to-action on it, and where to change the words and numbers. For the code, build pipeline, and SEO internals, see [marketing-site-dev.md](#).

1. What this is

The marketing site for **Virtual Teammate** — a staffing agency for HIPAA-compliant medical, dental, and business virtual assistants (VAs, branded "Virtual Teammates" or VTs). It is a PHP-rendered website with **no build step**: you edit a file, save it, and refresh the browser to see the change live.

- **Live site:** <https://virtualteammate.com>
- **Local preview:** <http://localhost/vtnew/>

Every page is built from shared parts so the header, navigation, and footer stay consistent. Those shared parts live in [includes/](#) (covered in §5). Throughout this guide, "edit the page's [index.php](#)" means the file inside that page's own folder — e.g. the About page is [about/index.php](#).

2. The site at a glance

Page	Path	What it's for
Homepage	/	The main lead-gen page: hero, ROI calculator, proof, offer, CTAs
Services hub	/services/	Directory of all 10 roles (<i>localhost-only, work in progress</i>)
10 service pages	/services/<role>/	One deep page per role (5 medical, 5 dental)
Healthcare landing	/healthcare-landing/	Quiz-driven lead funnel for medical practices
Dental landing	/dental-landing/	Quiz-driven lead funnel for dental practices
Business landing	/business-landing/	Quiz-driven lead funnel for business owners
About	/about/	Founder, mission, principles, process
Business	/business/	Business & non-profit VA staffing
Careers	/careers/	VA recruiting: roles, culture, hiring process, apply
Case studies	/case-studies/	Real client KPI results
Contact	/contact/	Phone, email, booking, Phoenix HQ map
Guarantee	/guarantee/	The 30-Day Right-Fit Promise, in detail
Meet the team	/virtual-teammates/	Searchable VA talent directory
Terms	/terms/	Terms of Service (legal)
Privacy	/privacy-policy/	Privacy Policy (legal)

Two recurring promises appear all over the site — learn them once: the **30-Day Right-Fit Promise** (no-cost replacement, full money-back in the first 30 days, and backup coverage), and the **flat-rate pricing** (from **\$750 bi-weekly** full-time for the Pro tier, **\$1,000** for the Specialist tier; about **60–73% less** than a US in-house hire). If those numbers change, they need updating in many places — search the whole site for the figure.

3. Page-by-page reference

Every page sets its own SEO title/description at the very top of its `index.php`, then writes its content inside `<main>`. Most pages share the same building blocks: a **hero** (eyebrow tag + big headline + lead

paragraph + CTA buttons), proof/stat strips, content sections, an **FAQ**, and a closing **call-to-action**.

3.1 Homepage — /

Purpose: The flagship lead-generation page for medical & dental VAs, built around ROI and the guarantee. Its sections, top to bottom:

1. **Hero + stats** — Headline *"Short-staffed and overworked? Fully staff your practice in*

weeks, not months, for 73% less." with an animated rising graph, a four-point value list, an animated stats card (73% lower cost · 95% clean-claim rate · 4.9★ Google · 30-Day Promise), and a trust row. CTAs: **Book my practice staffing audit** and **Calculate my savings**, plus a **Get the HIPAA VA buyer's checklist** link.

1. **Client marquee** — A scrolling strip of client logos, auto-loaded from

[images/clients/marquee/](#).

1. **Proven Client Impact** — Four case-study cards (*"Targets set. Targets beaten."*) with real KPI gains (cancer center, multi-specialty clinic, primary care, endo/oral surgery).

1. **ROI calculator** — *"See your annual savings: in real time."* A slider (1–25 teammates)

drives live animated figures: annual/monthly savings, a savings-percentage gauge, a cost-comparison bar, and an expandable breakdown.

1. **Specialties** — *"Trained for your specialty, measured on your numbers."* Two big cards

(Medical and Dental), each with proof bullets and pill links to that side's five service pages, plus a HIPAA trust strip and the "Practice Staffing Audit" explainer.

1. **Guarantee** — The 30-Day Right-Fit Promise as three cards (no-cost replacement · money-back · backup coverage).

1. **Process** — *"Hire in weeks, not months."* Three steps: book the audit → meet & interview → launch and go live.

1. **Meet the Team profiles** — Up to 8 VA cards pulled **live from the portal database**

(medical/dental, with photos). Clicking a card opens the **Request a teammate** modal. If the database is unavailable, a graceful fallback card shows instead.

1. **Security & Compliance** — Five cards (HIPAA training, BAA-compatible agreement, aligned controls, full audit trail, device & access security), each split into "What it is" and "What it means for you."

1. **Global Reach** — *"A bigger bench, a better match, on your time zone."* Six benefit bullets beside an animated world map.

1. **Press & News** — A scrolling strip of press logos (driven by [js/main.js](#)).

2. **FAQ** — Eight questions (cost, fit/guarantee, security, speed, software, location, point of contact, contracts). Also fed to search engines as structured data.

1. **Offer** — *"Here's exactly what you get."* Six cards summarizing the package and pricing.

2. **CTA stages** — *"Three Ways to Start"*: the buyer's checklist, the practice staffing audit, and the jumpstart/strategy call.

1. **Footer** + scroll-to-top button.

Forms & CTAs: All buttons open one of the shared modals — **practice-audit** and **strategy-call** (HubSpot Meetings booking embeds), **buyers-checklist** (HubSpot form), and **request** (a teammate-request form that posts to `lead.php`). See §4.

What to edit: Hero copy, stat numbers, case-study figures, the ROI calculator's pre-rendered default values (keep in sync with the rate in `js/main.js`), specialty pill links, FAQ, offer cards, and process steps — all in `index.php`.

3.2 Services hub — `/services/`

Purpose: A directory of all ten roles, grouped Medical (5) and Dental (5) as bento-grid cards, with the biller highlighted as the "Specialist role" feature card on each side.

Publish status: This hub is **localhost-only** (work in progress). On any other host it redirects to the homepage `#specialties` section, and it carries `noindex,nofollow`. The ten individual service pages below are **fully live** regardless.

What to edit: The role cards are hardcoded PHP arrays (`$medical` , `$dental`) near the top of `services/index.php` — each entry has a slug, icon, name, and blurb.

3.3 The ten service pages — `/services/<role>/`

These are the heart of the site's organic-search and conversion strategy: one dedicated page per role a practice might hire, each targeting how that buyer actually searches (e.g. "virtual medical receptionist," "dental billing virtual assistant"). There are **ten** — five medical and five dental. They **are published and listed in the sitemap**.

Every service page follows the same anatomy, so once you've seen one you can edit any of them:

1. **Hero** — eyebrow tag, an `<h1>` headline, and a lead paragraph framing the pain and the promise; three trust badges (HIPAA · Bilingual · Live in 1–2 Weeks); two CTAs (book an audit / get the buyer's checklist).

1. **Stat strip** — Up to 73% lower cost · 1–2 weeks to start · 4.9★ Google · 30-Day Promise.

2. **What they handle** — a checklist of the role's tasks beside a "Right now vs. with a

teammate" before/after.

1. **Why practices do this** — a six-card benefits grid.
2. **Plugs into your setup** — chips listing the phone systems, EHRs, and practice-management

software the teammate works inside.

1. **How it works** — three steps reframed for the role.
2. **FAQ** — six role-specific questions (also structured data for search).
3. **CTA** — the shared booking/lead block ([includes/service-cta.php](#)).

To edit a page's copy, open its [index.php](#) (e.g. [services/medical-receptionist/index.php](#)); the SEO title, description, and FAQ entries are PHP variables at the very top of the file.

Medical roles

- **Medical Receptionist** — [/services/medical-receptionist/](#) — *Phones & Front Desk · "Never

miss a patient call again."* Answers phones live, books/confirm/reschedules, runs reminders & recall, checks insurance, handles intake and portal messages, bilingual. Works with RingCentral, Weave, Zoom Phone, Nextiva, 8x8 and EHRs like Epic, Athenahealth, eClinicalWorks.

- **Medical Administrative Support** — [/services/medical-administrative-support/](#) — *Front-Office

Help · "Take the paperwork off your team's plate."* Chart prep, intake, records, prior auths & referrals, inbox/calendar, keeping the EHR clean.

- **Virtual Medical Assistant** — [/services/medical-assistant/](#) — *Clinical Support · "Give your

MAs their day back."* Visit prep, refills, prior authorizations, routing results, care coordination, patient follow-up.

- **Medical Biller** — [/services/medical-biller/](#) — *Medical Billing Help · "Get paid for the

work you've already done."* Clean claims daily, denial work, chasing unpaid claims, posting & reconciling, patient balances, coverage/prior-auth checks.

- **Medical Scribe** — [/services/medical-scribe/](#) — *Real-Time Charting · "Stop charting after

the kids are asleep."* Live notes over an encrypted link, orders and referrals, your templates, keeping pace all clinic day, tidying the chart for sign-off.

Dental roles

- **Dental Receptionist** — [/services/dental-receptionist/](#) — *Phones & Front Desk · "Keep every

chair full."* Live calls, booking/confirming, recall & reactivation, dental insurance checks, new-patient intake, bilingual; works on your phone system and PMS.

- **Dental Admin** — [/services/dental-admin/](#) — *Dental Back Office · "Walk in to a day that's

already prepped."* Insurance verification & benefit breakdowns, chart and treatment-plan prep, records, forms & e-signatures, reports. Works in Dentrix, Open Dental and more.

- **Dental Biller** — </services/dental-biller/> — *Dental Billing Help · "Stop leaving production

stuck in claims."* Clean claims with narratives and attachments, denial work, chasing unpaid claims, posting EOBs, secondary claims & pre-auths, patient statements.

- **Dental Scribe** — </services/dental-scribe/> — *Real-Time Charting · "Eyes on the patient,

not the keyboard."* Live clinical notes, perio charting, logging existing/proposed treatment, closing the chart chairside.

- **Dental Treatment Coordinator** — </services/dental-coordinator/> — *Treatment & Recall ·

"Turn diagnosed treatment into booked visits."* Works the unscheduled-treatment list, presents financing, fills hygiene recall, tightens the schedule, follows up until it's booked.

3.4 Healthcare landing — </healthcare-landing/>

Purpose: A focused, quiz-driven funnel for medical practice owners. Headline: "*Our teammates. Your whole back office. 73% less than in-house hires.*"

Sections: hero with a value checklist and offer; a proof bar + stats; **Proven Client Impact** (four case cards); *What they take off your plate* (six back-office areas); the **Offer** block with pricing; the **Practice Efficiency Quiz** (6 questions); the three-commitment guarantee; an 8-question FAQ; and a final dual CTA.

The lead engine — the quiz: Six questions estimate hours and revenue lost to admin, then ask for **email + phone** to unlock a downloadable report. On submit it posts to **two places:** the HubSpot form endpoint *and* the site's own [lead.php](#). Secondary CTAs open the **practice staffing audit** booking and the **buyer's checklist** download.

What to edit: Hero/offer copy and pricing, the four case cards, and the quiz questions and result thresholds, all in [healthcare-landing/index.php](#).

3.5 Dental landing — </dental-landing/>

Purpose: The dental counterpart, same structure, dental-specific copy. Headline: "*Our teammates. Your whole back office. 73% less than in-house hires.*" Proof points center on no-show reduction, chairs filled, recall, and clean claims; software references are Dentrix, Open Dental, Curve, Denticon, Carestream. Includes a 6-question **Dental Practice Efficiency Quiz** and a 10-question FAQ. Same dual lead capture (HubSpot + [lead.php](#)).

What to edit: [dental-landing/index.php](#) — hero, case cards, quiz, FAQ.

3.6 Business landing — </business-landing/>

Purpose: A quiz-first funnel for general business owners. Headline: "*How much is busywork costing your business?*" The page **opens with the quiz** (8 questions, including one multi-select), then shows trust stats, a "Hidden Cost of Busywork" section, a "What they take off your plate" six-area grid, a 4-question FAQ, and a final CTA.

Key difference: the primary closing CTA is an **external Calendly/HubSpot Meetings discovery call** ("Book a Free 15-Min Consultation"), alongside a "Buy Back Your Company's Time" modal. The quiz still posts to HubSpot + [lead.php](#).

What to edit: [business-landing/index.php](#) — hero image and copy, quiz questions, benefit grid, and the consultation link.

3.7 About — </about/>

Purpose: Build trust through founder, mission, and process. Sections: hero with an "at a glance" panel; a stats bar (2,000+ VTs placed · 600+ practices · 30+ years · 4 countries); the **founder** section (Chris McShanag); the **mission** ("value-creation culture"); **Core Principles** (6 cards); **Why Practices Choose VT** (6 cards); the 3-step **process** timeline; and a 6-question FAQ. CTAs open the practice-audit booking and link to case studies.

What to edit: [about/index.php](#) — headlines, the four stat numbers, the founder narrative, principles/benefit cards, process steps, and FAQ.

3.8 Business — </business/>

Purpose: Show that VT staffs beyond healthcare. Sections: hero ("*Beyond healthcare: Virtual Teammates for every function*"); **Roles We Staff** (6 cards: Administrative, Sales/SDR, Marketing, Finance, Customer Service, Non-profit Ops); a **Roles That Drive Growth** deep-dive (8 articles); **Meet the Bench** (a filterable gallery of real *business* teammates); a 6-question FAQ; and a **Two Ways to Start** block (operational assessment vs. buy-back).

Forms: opens the **operational-assessment**, **buy-back**, and **request-a-teammate** modals.

What to edit: [business/index.php](#) — role cards, the eight deep-dive articles, FAQ, and the two CTA cards.

3.9 Careers — </careers/>

Purpose: Recruit VA talent. Sections: hero ("*Create your future. Live your best life.*"); a stats bar; **Roles We Hire For** (8 departments); **Benefits** (6 cards); **Mission & Values** (7 values); the **8-step hiring process** timeline; **testimonials** (6 teammate quotes); a 6-question FAQ; and a final CTA. "Explore Open Positions" links out to the Teamtailor job board.

Form: a built-in **application form** (name, email, location, message, and a role dropdown with the 8 departments) that posts a lead; confirmation promises a reply in 1–2 business days.

What to edit: [careers/index.php](#) — role and benefit cards, the values, hiring-process steps, testimonials, FAQ, and the role dropdown options.

3.10 Case studies — [/case-studies/](#)

Purpose: Prove results with real numbers. Sections: hero with a sample KPI scorecard; **Across All**

Workstreams (four aggregate stat cards); **Client Spotlights** (four anonymized case cards — cancer center, multi-specialty clinic, primary care, endo/oral surgery — each with target-vs-result KPIs); **How We Measure** (Targeted KPI → Results → Value Created → Achievement %); **Why VT Delivers** (6 cards); a 6-question FAQ; and the shared "ways to start" CTA.

What to edit: [case-studies/index.php](#) — the four case narratives and KPI numbers, the aggregate stats, and the FAQ. Client identities are intentionally kept confidential.

3.11 Contact — [/contact/](#)

Purpose: Make it easy to reach a real person. Sections: hero with a "Client Success Desk" card; **Three Ways to Reach Us** (phone, email, book-a-call cards); a quick-facts bar (hours, HQ address, service area, portal login); a **Google Map** of the Phoenix HQ with a "Get Directions" link; the shared global-coverage block; a 6-question pre-contact FAQ; and the booking CTA.

Key details (appear in several places + the schema): phone **(480) 847-2498**, email **clientsuccess@virtualteammate.com**, address **2425 East Camelback Road, Suite 400, Phoenix, AZ 85016**, hours **Mon–Fri 8am–6pm MST**.

What to edit: [contact/index.php](#) — update the phone, email, address, and hours everywhere they appear (including the structured-data block near the top).

3.12 Guarantee — [/guarantee/](#)

Purpose: Sell the risk reversal. Sections: hero ("*Hire a Virtual Teammate zero-risk. Period.*"); a stats strip (30-day window · 2 business days to replace · \$0 fees · 95%+ retention); **The Three Commitments**; what the practice staffing audit covers; **How to Claim the Promise** (3 steps); a side-by-side **risk comparison** (VT vs. a typical VA agency); **Why We Can Offer This** (6 cards); a 6-question FAQ with plain-language fine print; and a final CTA.

What to edit: [guarantee/index.php](#) — the three commitments, the comparison rows, the stats, and the FAQ/fine print.

3.13 Meet the team — [/virtual-teammates/](#)

Purpose: A searchable talent directory that doubles as a lead funnel. Sections: hero with a photo collage; a **Value Matching** lead form; **the bench** with search + department/skill filters and a card grid (12 at a time, "Load more"); SEO content blocks (Why VT, VAs for every team, How matching works, FAQ); and a closing CTA.

How profiles work: Cards are pulled **live from the portal database** (HIPAA medical/dental VAs).

Anonymous visitors see a teaser (name, role, skills, scores) and a locked notice; **logged-in portal clients** see the full CV (intro video, résumé, assessment scores) and can request the teammate directly. The lead form posts to `lead.php`; clicking "Get matched" on a teaser pre-fills it.

What to edit: `virtual-teammates/index.php` — hero copy, the lead-form labels, the SEO content sections, and the FAQ. The **profile data itself is not edited here** — it comes from the portal (see the portal guide).

3.14 Terms — `/terms/` and Privacy — `/privacy-policy/`

Purpose: The two legal pages. **Terms** governs use of the website only (staffing engagements are covered by a separate signed agreement); **Privacy** explains what the site collects and how it's used, and states plainly that **no patient/PHI should be submitted through public forms**. Both show a "Last updated" date and a `support@virtualteammate.com` contact.

What to edit: `terms/index.php` and `privacy-policy/index.php` — the "Last updated" date and the contact email are the safe everyday edits; **route any wording changes through legal/ compliance** before publishing.

4. Forms, CTAs, and what happens on submit

Most calls-to-action across the site open one of a few **shared modals**, identified by a `data-cta-intent` value on the button:

- **practice-audit / strategy-call** — open a **HubSpot Meetings** booking calendar embed

(no form fields; the visitor picks a time).

- **buyers-checklist** — opens a **HubSpot form** to email the "HIPAA VA buyer's checklist" PDF.
- **request** — opens a "Request a teammate" form (used by the homepage, business, and talent

directory) that posts to `lead.php`.

Standard lead forms and the quizzes ultimately send the visitor's details to the site's own endpoint, `/lead.php`. When a visitor submits:

1. Their information is **saved** to the internal leads list.
2. The team is **notified by email** automatically.
3. The lead is **synced to HubSpot** so it flows into the sales pipeline.
4. The visitor sees an instant thank-you message.

The three **landing-page quizzes** additionally post straight to a HubSpot form endpoint (so the quiz answers and scores are captured there too) in parallel with `lead.php`. From your side, every submission shows up in the staff portal's **Leads** page and raises its "new leads" badge — see the portal user guide.

All forms include an invisible "honeypot" field that silently absorbs spam bots, so junk submissions don't reach the team.

5. Shared parts & everyday edits

Most cross-page changes happen in three places: shared partials in `includes/`, the single stylesheet `css/style.css`, and the single behavior file `js/main.js`.

Navigation and footer

- **Navigation** (logo, menu links, the Healthcare mega-menu): `includes/nav.php`
- **Footer** (links, contact info, legal): `includes/footer.php`

Menu anchors like `#specialties` or `#faq` jump to sections on the homepage.

Client logos (the scrolling client strip)

Loaded automatically from `images/clients/marquee/`. To add a client, drop a logo image (`.webp`, `.png`, `.jpg`, or `.svg`) into that folder — it appears on the next page load. To remove one, delete its file. No code change needed.

Press logos (the news strip)

Listed in a `press` array near the top of `js/main.js`. Each entry has a name, an image path under `images/press/`, and a link. Edit that array and add the matching image to update.

ROI calculator numbers

The savings rates are constants in `js/main.js` (the bi-weekly cost of a Virtual Teammate vs. a comparable US in-house hire). If pricing changes, update those constants — the calculator, gauge, and bar chart all recalculate. **Also** update the homepage's pre-rendered default figures so non-JavaScript visitors and search crawlers see matching numbers.

Meet-the-Team / talent profiles

The homepage "Meet the Team" cards and the `/virtual-teammates/` directory are populated **from the portal database**, not the page markup. To change who appears or their details, edit the VT in the portal (see the portal user guide), not the marketing page.

FAQ, testimonials, and section copy

These live directly in each page's `index.php`. Editing the text in place updates the page; FAQ entries are also emitted as structured data for search engines (see the developer reference).

Images

- **Logos & favicons:** `images/` root.
- **Hero & section photos:** `images/photos/` and `images/`.
- **Client logos:** `images/clients/` and `images/clients/marquee/`.
- **Press logos:** `images/press/`.
- **Downloadable PDFs:** `images/pdf/`.

When replacing a photo, keep the same filename to avoid touching code, or update the reference in the page.

6. How the site looks on different screens

The design is fluid and adjusts to the viewer's screen:

- **Standard desktop / laptop:** full multi-column layout (up to a 1980px-wide canvas).
- **Tablet / small laptop ($\leq 1280\text{px}$):** the menu collapses to a hamburger and sections stack.
- **Phone ($\leq 768\text{px}$):** further simplified, full-width, larger touch targets.
- **Very large / high-resolution displays:** the whole layout scales up proportionally to fill

big monitors.

Animations (fade-ins, counters, marquees) are automatically disabled for visitors who have asked their device to reduce motion, for accessibility.

7. Quick reference — "where do I change...?"

I want to change...	Edit this
A menu link or the Healthcare mega-menu	<code>includes/nav.php</code>
Footer text or links	<code>includes/footer.php</code>
Homepage hero / FAQ / offer / process	<code>index.php</code>
A specific service page's copy	<code>services/&lt;role&gt;/index.php</code>
The services-hub role cards	the <code>\$medical</code> / <code>\$dental</code> arrays in <code>services/index.php</code>
A landing-page quiz or its results	the relevant <code>*-landing/index.php</code>
Phone, email, or HQ address	<code>contact/index.php</code> (and check the footer)
Pricing (\$750 / \$1,000 / 60–73%)	search the whole site — it appears on many pages
Client logos in the strip	add/remove files in <code>images/clients/marquee/</code>
Press logos	the <code>press</code> array in <code>js/main.js</code> + <code>images/press/</code>
ROI calculator rates	the rate constants in <code>js/main.js</code> (+ homepage defaults)
Who appears in Meet the Team / talent directory	the VT records in the portal
Colors / spacing / fonts	<code>css/style.css</code>
Where forms go / lead handling	see the developer reference (<code>lead.php</code>)
Legal wording (Terms / Privacy)	<code>terms/</code> / <code>privacy-policy/</code> — via legal review

For anything involving code structure, the build pipeline, SEO data, or the lead-handling internals, see `marketing-site-dev.md`.
