

Virtual Teammate Portal — User Guide

A guide to the staff & client portal for everyone who logs in: super admins, clients, client success managers (CSMs), and virtual teammates. For the code behind it, see `portal-dev.md`.

1. What the portal is

The Virtual Teammate Portal is the private workspace where the team and clients manage day-to-day work: tasks, meetings, daily reports, messaging, productivity, and (for staff) the full client and talent pipeline.

- **Address:** the portal lives at `/portal/` on the site.
- **Sign in:** go to `/portal/`, enter your email and password. You stay signed in until you

log out or your session expires.

- **Your profile:** open **Profile** to update your name, phone, job title, and photo.
- **Your password:** change it any time from the **Password** page (you'll confirm your

current password first).

Not yet documented here: the portal can also be installed as an app on your phone or desktop and can send push notifications. Those features are covered separately and are intentionally left out of this guide for now.

2. Roles at a glance

What you can see and do depends on your role. There are five:

Role	Who it's for	In short
Super admin	Virtual Teammate staff (founders, operations)	Full access — runs the whole system.
Client	Client company employees	Manage their assigned virtual teammates and work.
CSM	Client Success Managers	Manage their book of clients and those clients' VTs.
VT (hired)	Placed virtual teammates	Do daily work for their client and report on it.
VT (on-pool)	VTs not yet placed	A trimmed view focused on readiness and messaging.

Your navigation menu only shows the pages your role is allowed to use.

3. Super admin

Super admins (Virtual Teammate staff) have the complete picture and all controls.

Dashboard. A system overview: user counts, active clients, upcoming meetings, recent end-of-day reports, last 7 days of site traffic, and system status (cache and HTTPS).

People & relationships.

- **Users** — create, edit, activate/deactivate any account.
- **Clients** — manage client companies and their contract status.
- **CSMs** — view each CSM and the clients/VTs they manage.
- **VT Profiles** — manage virtual-teammate records (status, department, skills, resume, video, photo).

- **Assignments** — connect CSMs to clients and VTs to clients.
- **Relationships** — see the whole web of who manages and works with whom.

Sales & leads.

- **Leads** — every form submission from the marketing site. New leads raise a badge on the menu item until you view them; you can delete leads here.
- **Client Funnel** — the pipeline from lead to active client.

Operations (shared with other roles).

- **Meetings, EOD reports, Tasks, Messages, Productivity** — the super admin can see across all of these.

System & outreach.

- **HubSpot Sync** — import and refresh VTs, clients, and CSMs from HubSpot (see §7).
- **Email** — compose and send an email to a recipient from within the portal, and set which address receives new-lead notifications.
- **Traffic** — marketing-site pageview analytics (path, location, referrer).
- **Audit** — an immutable log of every important action (logins, edits, settings changes).
- **System toggles** — turn asset caching and forced-HTTPS on or off.

4. Client

Clients manage the virtual teammates assigned to their company.

Dashboard. Team overview: assigned VTs, active tasks, hours logged this month, and upcoming meetings.

What clients can do.

- **My VTs** — view the virtual teammates working for them.
- **VT Assignments** — see which VTs are assigned and their status.
- **Tasks** — create and assign tasks to their VTs, set priority and due dates, and mark them

complete (attachments supported).

- **Meetings** — schedule and review meetings with their CSM or VTs.
 - **Productivity Reports** — review their team's end-of-day reports and KPI summaries.
 - **Messages** — chat one-to-one with their CSM and VTs.
 - **Request a VT** — ask for an additional virtual teammate; the request goes to a CSM for review.
 - **Invoices** — view billing history.
 - **Resources** — curated documents and links.
 - **Notifications** — alerts for tasks, meetings, and messages.
-

5. CSM (Client Success Manager)

CSMs manage a book of clients and the VTs working for those clients.

Dashboard. Book-of-business view: their clients, those clients' VTs, and key metrics.

What CSMs can do.

- **My Clients & VTs** — the clients they manage and each client's virtual teammates.
 - **VT Assignments** — manage which VTs are assigned to which clients.
 - **Meetings** — schedule and track meetings with clients and VTs.
 - **Productivity Reports** — monitor team productivity and KPIs across their book.
 - **Messages** — chat with clients and VTs.
 - **Request a VT (review)** — approve or decline clients' requests for additional VTs.
 - **Special Links** — generate shareable links to talent profiles/resources.
 - **Resources** — shared documents and links.
 - **Notifications** — alerts across their accounts.
-

6. Virtual Teammate (hired and on-pool)

Virtual teammates use the portal to do their daily work and report on it. Hired VTs (placed with a client) see the full set; on-pool VTs (awaiting placement) see a trimmed set.

Dashboard. Daily view: today's assignments, upcoming meetings, unread messages, and (for hired VTs) payslip status.

Hired VT can:

- **My Assignments** — daily tasks from their client/CSM; mark them complete.
- **My Meetings** — scheduled calls with their client or CSM.
- **Productivity Reports / EOD** — submit an end-of-day report each day: best work done,

where they need help, focus for next, and KPI progress.

- **Messages** — chat with their CSM and teammates.
- **My CSM & Teammates** — see who manages them and who else works at the same client.
- **Payslips** — view payroll history.
- **Resources** and **VTM Apps** — training materials and the directory of approved tools.
- **Refer a Friend** — share a referral link and track referral bonuses.
- **Notifications** — alerts for new tasks, meetings, and messages.

On-pool VT sees a focused subset: **Productivity Reports, Messages, Resources, VTM Apps, Refer a Friend**, and **Notifications**. Assignments, meetings, payslips, and the CSM/teammate relationship view appear once they are placed with a client.

7. HubSpot Sync (super admin)

The portal keeps its people in step with HubSpot. From the **HubSpot Sync** page a super admin can:

- **Test the connection** to confirm the API token works.
- **Run a sync** that imports/updates virtual teammates, clients, and CSMs from HubSpot. The

sync runs in small batches and shows live progress, so it never times out — you can watch it advance and **pause / resume / reset** it.

- **Sync one record** by searching for a specific VT or client and pulling just that person.
- **Choose what's imported** — including whether to download photos, resumes, and videos.

A VT's HubSpot status decides their portal role (for example, "Hired" becomes a hired VT and "Matched/Unmatched" becomes on-pool). Newly imported people are created with a temporary default password that should be changed on first login.

8. Features everyone shares

- **Notifications.** A bell with an unread count. Each alert links to the relevant page. You

can mark items read, delete them, and choose whether to also receive **email copies** (toggle per account).

- **Messaging.** One-to-one chat with the people relevant to your role. New messages arrive without reloading the page and raise a notification.

- **Meetings.** Scheduled calls with date/time, topic, attendees, and a join link. Times are shown in your local timezone.

- **End-of-day (EOD) reports.** VTs submit a short daily summary; clients, CSMs, and admins review them on the productivity pages.

- **Tasks.** Assignable to-do items with priority, due date, status, and file attachments.

- **Productivity.** Dashboards that roll up EOD reports and KPIs for a person or a team.

- **Resources / Knowledge Center.** Curated links, documents, and training materials.

9. Signing out

Use **Log out** from the menu. For shared computers, always log out — the portal keeps you signed in otherwise. If you forget your password, a super admin can reset it from the Users page.
